

Translation of the reference letter from the company WSW - Energie und Wasser AG

Dear Ladies and Gentlemen,

we would be happy to send you our experiences with Evercrete Vetrofluid.

With its subsidiaries, the WSW Group covers the business areas of energy supply, drinking water production, local public transport, urban drainage, energy services, waste management municipally, regionally and partly also nationwide.

With around 3167 employees, the WSW Group is one of the largest employers in Wuppertal.

In May 2003 we applied Evercrete Vetrofluid to concrete that was around 10 years old in a rainwater sediment tank. This work was constructet with the company Strabag and AWAS. The application with Evercrete Vetrofluid was implimented because the concrete had the problem of being heavily sanded, especially when we cleaned the concrete with our high-pressure truck up to 500 bar. The concrete was previously cleaned and then treated with Evercrete Vetrofluid to full saturation.

Even after 19 years, we can confirm that Evercrete Vetrofluid has considerably strengthened the concrete and made it more waterproofed, so that we have no more problems of sanding.

The rainwater sedimentation tank treated with Evercrete Vetrofluid will also furthermore positive rated positive reviews.

Best regards

Mr. Ronde
deputy group leader

Mr. Janorschke
WSW-construction manager
